

# Assisted Outpatient Treatment: Transforming Care for Individuals Living with Psychosis

FREE: 1 IDFP CEU for LSW/LCSW, LPC/LCPC, Psychologist, and IAODAPCA (pending)

This training will focus on improving understanding and care for individuals living with psychosis. It begins by defining psychosis in a meaningful way, highlighting how it affects perception, thinking, and behavior, and underscores the profound suffering it can cause for individuals and their support systems. The training introduces the EASE model—an effective and compassionate approach to treatment that emphasizes engagement, support, and evidence-based care. Through this framework, the training explores how Assisted Outpatient Treatment (AOT) can play a vital role in promoting recovery, stability, and improved quality of life.
